No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents Thermomyces lanuginosus TL-gamma, a novel ATP-dependent, plus end-directed microtubule motor protein that is a member of the unc-104 family and kinesin superfamily. The invention provides TL-gamma nucleic acids (see AXX87656), proteins and antibodies, and methods of screening for TL-gamma modulators potentially useful for treating hyphal fungal infections and diseases caused by mutated TL-gamma, e.g. neurodegeneration involving anterograde axonal transport, such as Alzheimer's, Parkinson's or Huntington's diseases or amyotrophic lateral sclerosis. Detection of TL-gamma allows differentiation between hyphal

The invention relates to human nucleic acids (AAI57798-AAI61369) and the CC encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful cC in gene therapy. A composition containing a polypeptide or polynucleotide cC in gene therapy. A composition containing a polypeptide or polynucleotide cC in gene therapy. A composition containing a polypeptide or polynucleotide cC in gene therapy. A composition containing a polypeptide or polynucleotide cC cC in gene therapy. A composition containing a polypeptide or polynucleotide cC system, such as peripheral nervous injuries, peripheral neuropathy and cC localised neuropathies and central nervous system diseases, such as cC Alzheimer's, Parkinson's disease, Huntington's diseases, such as cC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic cc utilisation of the activity such as: Immune system suppression, cC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, caseays for receptor activity, arthritis and inflammation, leukaemias and cC c.N.S disorders. Note: The sequence data for this patent did not form compared the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21-JAN-2000;

                                                                     ঠ
                                                                                                                                                                                                                                                                                                                         CC The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine autoimmune/inflammatory disorders, gastrointestinal disorder, endocrine CC disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the companion, but was obtained in electronic format directly cc from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                               Query Match

N-PSDB;
The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated

The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nuclectide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be CC used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorder, endocrine CC disorder, neurological disorders, developmental disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the CC invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly CC from WIPO at www.wipo.int/pct/en/sequences/listing.htm

                                                                             ₽
                                                                                                        S
                                                                                                                                                                                                                                                          The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine CC disorder, neurological disorders, developmental disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the CC gene therapy. The present sequence represents a dithp protein of the cC invention. Note: The sequence represents a dithp protein of the CC invention. Note: The sequence represents a dithp protein of the CC invention. Note: The sequence represents a dithp protein of the CC invention. Note: The sequence represents a dithp protein of the CC invention. Note: The sequence represents a dithp protein of the CC invention. Note: The sequence represents a dithp protein of the CC invention.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide
                                                                       Novel nucleic acids and polypeptides, useful as central nervous system injuries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human polypeptide SEQ ID NO

XX New diagnostic and therapeutic polynucleotides and polypeptides, useful PT in diagnosting a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or ry in gene mapping.

XX The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human collecules, e.g. cell proliferative disorders, endocrine disorder, neurological disorder, developmental disorders, endocrine considerations caused by virus, bacteria, fungi or parasite. The dithp collecules may also be used in genetic mapping, in identifying individuals consideration. Note: The sequence attained and for somatic or germline constituention. Note: The sequence data for this patent is not represented in constituent of the printed specification, but was obtained in electronic format directly form witch and similarity 61.9%; Pred. No. 8.4e-103;

                                                                                                                                                                                                                                                               The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine autoimmune/inflammatory disorder, gastrointestinal disorder, endocrine confidency neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp completes may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this pattent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

                                                      The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from MIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gene
                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human diagnostic and therapeutic pprotein SEQ ID NO:3895.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             autoimmune/inflammatory disorder, developmental disorder, endocrine autoimmune/inflammatory disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine autoimmune/inflammatory disorder, developmental disorder, endocrine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or

                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine CC disorder, neurological disorder, developmental disorder, endocrine CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide CC polymorphisms, as molecular weight markers, and for somatic or germline CC polymorphisms, as molecular weight markers a dithp protein of the CC invention. Note: The sequence represents a dithp protein of the CC invention. Note: The sequence represents a dithp protein of the CC invention.                                                                                                                                 Sequence 1816
                                                                                                                                                                              The present invention describes the coding and protein sequences of the human kinesin-like protein HKLP. It is thought that the protein could be involved in neurological disorders, infertility, spontaneous abortion, neonatal chromosome disorders, aneuploidy and cancers. This is due to its function in the movement of microtubules. The protein shows homology to the murine KIF1B and KIF1B proteins. The sequences disclosed in the invention can be used in the isolation of similar human proteins and in vector production. In addition, the biallelic markers shown can be used in disease diagnosis and population studies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 46; Page 189-192; 199pp; English.

                                      The invention provides a human kinesin-associated gene encoding a protein having a motor domain and another protein encoded by the human kinesin-associated gene having no motor domain. The genes are useful for the diagnosis and treatment of human neuroblastoma, and judgement of prognosis of this disease. Also provided are probes and primers hybridising to part of the KIFIB-beta gene, useful for diagnosing neuroblastoma in which the gene sequence is detected in tissue samples. The present sequence represents a human kinesin-associated protein having

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC This invention describes a novel human kinesin-like motor protein (KLIMP)
C(I) which has cytostatic, anti-convulsant, anti-Alzheimer's, anti-
CC Parkinsonian, antidiabetic, anti-Creative, immunomodulatory,
CC antiinflammatory, anti-AIDS, anti-theumatic and antiarthritic activity.
C(I) and the protein it encodes may be used in the prevention, treatment
CC and diagnosis of diseases associated with inappropriate KLIMP expression
CC such as cancers, neurological disorders and disorders of vesicular
CC transport. For example, (I) (and vectors containing (I) (IV)) and the
CC decreased KLIMP expression such as cancers (e.g. lymphoma, melanoma and
CC cancers of the breast lung and prostate, neurological disorders (e.g.
CC epilepsy, Alzheimer's disease and prostate, neurological disorders (e.g.
CC endepsy, Alzheimer's disease and parkinson's disease), disorders (e.g.
CC and gastric/duodenal ulcers), and some immune/inflammatory diseases (e.g.
CC acquired immune deficiency syndrome AIDS), rheumatoid arthritis and toxic
CC shock syndrome). This sequence represents the human KLIMP protein

                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is human kinesin-like motor protein (KLIMP) from Incyte clone 1281811. KLIMP and the corresponding polynucleotide are useful for diagnosis, treatment and prevention of disorders associated with decreased expression of KLIMP e.g. cancers (such as adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma, teratocarcinoma, and, in particular, cancers of the adrenal gland), neurological disorders (such as epilepsy, ischaemic cerebrovascular disease, Huntington's disease, eerebral neoplasms, Alzheimer's disease, Pick's disease, Huntington's disease, mental disorders), and disorders of vesicular transport (such as cystic fibrosis, diabetes mellitus, AIDS (Acquired Immune Deficiency Syndrome), viral, bacterial, fungal, helminthic, and protozoal infections)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acid sequences encoding a human kinesin-like motor protein (KLIMP) useful for the prevention and treatment of diseases associat with inappropriate KLIMP expression such as cancers and neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tang

The invention discloses an isolated human kinesin-like motor protein (KLIMP), and the polynucleotide encoding it. Kinesins are microtubule compound protein which have an activity that includes microtubule compound that activity which generates force and directional compound. The KLIMP protein is useful for screening a compound for effectiveness as an agonist or antagonist, for screening a compound that specifically binds KLIMP or modulates its activity and for preparing a copylyclonal or monoclonal antibody by hybridoma technology. The compound for effectiveness in altering expression of a KLIMP, for screening a compound for effectiveness in altering expression of a KLIMP, for assessing toxicity of a test compound, in a diagnostic test for a condition or a disease associated with the expression of KLIMP, for conditions or a disease associated with the expression of KLIMP, for conditions associated with a modulated expression of functional KLIMP are conditions associated with a modulated expression of functional KLIMP are conditions associated with a modulated expression of functional KLIMP are conditions associated with a modulated expression of functional KLIMP are conditions associated with a modulated expression of functional KLIMP are conditions of the conditions associated with abnormal vesicle trafficking such as acquired compoundeficiency syndrome (AIDS), allergic reactions, multiple sclerosis, rheumatoid arthritis and viral, bacterial, fungal, helminthic and corrotoxal infections). The sequence presented is the human KLIMP protein

                                                                                                                                                                                                                                                                                                                                                                                              Tang
                          The invention relates to a new isolated polypeptide comprising the hum kinesin-like motor protein (KLIMP) appearing as ADG63388, a naturally-occurring amino acid sequence that is at least 90% identical to KLIMP occurring
                                                                                                                                                                                                         New human kinesin-like motor protein and polynucleotides, useful for diagnosing, preventing or treating diseases or conditions associated aberrant protein expression, e.g. cancer, neurological disorders, All
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diabetes; Grave's disease; Addison's disease; AIDS autoimmune haemolytic anaemia; glomerulonephritis; inflammatory bowel disease; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; kinesin-like motor protein; KLIMP; cancer; Alzheimer's disease; Parkinson's disease; disorder of vesicular transport; cystic fibrosis;
                                                                                                                                      Claim

                                                                                                                                                                                                                                                                                                                                                              selected compound is useful for treating, alleviating, or preventing a kifBlbeta gene-associated disease, in particular Charcot-Marie-Tooth disease type 2A. Transgenic non-human vertebrate, are useful for screening for a candidate compound for treating, alleviating, or preventing a kiflBbeta gene-associated disease. KIF1Bb DNA is useful for gene therapy and for recombinant production of polypeptides. KIF1Bb antibody is useful for affinity purification of KIF1Bb and for detecting expression of kiflBbeta gene at the protein level. The present sequence is mouse KIF1Bbeta protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to KIF1Bb protein which belongs to kinesin superfamily of molecular motor proteins (KIFs). KIF1Bb is useful fiscreening for a compound binding to it. Composition comprising the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New KIF1Bb polypeptide having motor activity that transports synaptic vesicle precursor, is useful for developing therapeutic or preventive agent for kif1Bb gene-associated diseases e.g. Charcot-Marie-Tooth
                                                                                                                                                                                                                                                                                                                                  Sequence 1770 AA;

The invention relates to novel isolated polypeptides, mature forms of CC these, or a sequence that is at least 95 % identical to, or having one or conservative amino acid substitutions in the polypeptides. The CC polypeptides, nucleic acid molecules and antibodies are useful in the CC manufacture of a medicament for treating a syndrome associated with a CC human disease, preferably a NOVX-associated disorder. The nucleic acid molecules polypeptides and antibodies are useful for treating, CC preventing or diagnosing diseases such metabolic disorders, diabetes, CC obesity, infectious diseases (viral, bacterial, fungal, helminthic, and CC protozoal), anorexia, cancer, cardiovascular diseases (hypertension, CC atherosclerosis), neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, epilepsy, immune disorders, asthma, and various CC dyslipidemias. The nucleic acids and polypeptides may also be used as CC targets for the identification of small molecules that modulate or combibit e.g. neurogenesis, cell differentiation, cell proliferation, hematopoiesis, wound healing and angiogenesis, in gene therapy, in CC generation of antibodies that bind immunospecifically to NOVX substances CC for use in therapeutic or disgnostic methods. The nucleic acids are for use in therapeutic or disgnostic methods. The nucleic acids are CC corresponds to one of the NOVX polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 06-AUG-2002;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
The invention relates to a method (M1) of screening for modulators of a target protein. The method involves contacting the target protein with candidate agent, and determining whether the candidate agent modulates activity of target protein, where the target protein comprises a sequence that has more than 80% amino acid sequence identity to a fully defined kinesin family 14 (KIF14) protein (SEQ ID No:2) or the KIF14 motor domain sequence (SEQ ID No:3) for treating a subject with a cellular hyperproliferation, a method (M3) for treating a subject with a cellular hyperproliferation disorder, a method (M4) for identifying candidate subjects for treatment with an inhibitor of the activity of a target
                                                                                                                                                                                                           Screening for modulators of target protein e.g., kinesin family 14 protein, by contacting target protein with candidate agent, and determining whether candidate agent modulates activity of target protein.
                                                                                                                                                                                                                                                                                                                                             (ROSE-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventueseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                Human HsKifl3a protein sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1773 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid genes from Drosophila and

CC This invention relates to the nucleic acid and protein sequence of a CC novel microtubule motor protein HsKifija. The protein of the invention CC may have cytostatic; vulnerary; antirheumatic; antiagout; CC antiinflammatory; vasotropic; neuroprotective activities and may act as a cytoskeletal system modulator. The HsKifija nucleic acid is useful for CC creening for modulators of HsKifija, such modulators would be useful for CC modulating cytoskeletal system for treating conditions such as abnormal Stimulation of endothelial cells (e.g., atherosclerosis), solid and CC haemangiomas, acoustic neuromas, etc., abnormal wound healing, rheumatoid CC arthritis, Behcet's disease, gout or gouty arthritis, abnormal CC angiogenesis accompanying: rheumatoid arthritis, psoriasis, diabetic CC retinopathy, etc. The sequences of the invention are useful for the CC diagnosis, treatment, or prevention of cancer, neurological and vesicular CC transport disorders. Nucleic acids encoding the kinesins are useful for the SKifija, HsKifija and its homologues are also useful as diagnostic tools in vitro. The kinesins and in particular their motor domains can be used for separation of a specific ligand from a heterologous mixture in CC also be used in the field of nanotechnology. The present sequence CC represents the human HsKifija protein sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Key
Domain
                                                                                                                                                                                                                                                                                                                                                                                                              Human microtubule motor protein, HsKif13a, useful for screening modulators of HsKif13a which are used for modulating cytoskeletal system in conditions of benign tumors and rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                   Claim 11; Fig 2; 55pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            N-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; genome mapping; gene therapy; food supplement; virus; fungus; cell-proliferative disorder; neurodegenerative disease; bacterial; Parkinson's disease; Alzheimer's disease; autoimmune disease; multiple sclerosis; diabetes; genetic disorder; wound; burn; infection; arthritis; cytostatic; immunomodulator; nootropic; neuroprotective; antiparkinsonian; antidiabetic; immunosuppressive; dermatological; haemostatic; vulnerary; fungicide; antibacterial; virucide; protozoacide; antiarthritic.
The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ12066) or their mature protein coding portion, active domain codir protein or complementary sequences. The polynucleotides are useful for
                                                                                                                                                                                       New polynucleotides comprising sequences assembled from expressed sequence tags (ESTs), useful for treating cell-proliferative, neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or por coagulation disorders.

The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative diseases (Parkinson's or Alzheimer's disease), autoimmune diseases (multiple sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid disorders, platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

CC therapeutic (DITHP) polypeptides (II), which include e.g. enzymes, and CC therapeutic (DITHP) polypeptides (II), which include e.g. enzymes, and CC proteins involved in growth and development and receptors. (I) and (II) CC may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate DITHP expression. For example, (I) and (II) CC may be used to treat disorders associated with decreased polypeptide expression by rectifying mutetions or deletions in a patient's genome, CC that affect the activity of the DITHPs, by expressing inactive proteins CC or supplementing the patient's own production of them. (I) and (II) may be used to treat diseases, for example, cell proliferative disorder, CC Crohn's disease, acquired immune deficiency syndrome (AIDS), lymphoma, CC leukaemia, autoimmune disorders, and respiratory disorders. Additionally, CC (I) may be used to produce the DITHPs, by inserting the nucleic acids in the complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in CC assays to detect and quantitate the presence of similar nucleic acids in CC assays to detect and quantitate the presence of similar nucleic acids in CC assays to detect and substants may be in need of restorative therapy. (II) may also be used as antigens in the production of CC antibodies against DITHPs and in assays to identify modulators of DITHP C expression and activity. The anti-DITHP antibodies and antagonists may can be approached the process of antibodies may also be used as diagnostic agents for detecting the acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acceptant acc

The invention relates to an isolated human disease detection and CC sequence selected from 254 sequences (ABP51231-ABP5184) given in the specification, a naturally occurring polypeptide comprising a sequence (CC immunogenic fragment of (I). (I) is useful for screening a sequence (CC immunogenic fragment of (I). (I) is useful for screening a compound that (CC specifically binds (I) or modulates the activity of (I), and for (CC preparing a polyclonal or monoclonal antibody by hybridoma technology. (CC Nucleic acids (II) (ABQ72449-ABQ72700) encoding (I), and for (CC polymucleotide comprising. Oligonucleotides and antibodies are useful for (CC polymucleotide comprising. Oligonucleotides and antibodies are useful for (CC polymucleotide comprising. Oligonucleotides and antibodies are useful for (CC and for purifying (I) from a sample, for detecting MDDT in a sample, for detecting with the (CC and for purifying (I) from a sample, for detecting (I), an (CC and for purifying (I) from a sample. A composition comprising (I), an (CC associated with decreased or increased expression of functional MDDT. (I) are useful for diagnosing, treating or preventing discorders are selected from a cell proliferative disorder such as arteriosclerosis, extending or transgenic anthities, psoriassis, and cancer and an (CC allergy, anaemia, asthma, atherosclerosis, gout, multiple sclerosis or rheumatoid arthritis. (II) are useful for creating knockin humanised or transgenic animals to model human disease, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell condition or inversion among normal, carrier or affected individuals condition or inversion among normal, carrier or affected individuals condenses.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human diagnostic and therapeutic (dithp) copynucleotides and their associated polypeptides (DITHP polypeptides). The sequences of the invention are used in the treatment and diagnosis of cell proliferative disorders (e.g. atherosclerosis, cirrhosis), cancers (e.g. tumours of the adrenal gland, bone, bone marrow, brain, breast, corthymus), autoimmune/inflammatory disorders (e.g. asthma, bronchitis, psoriasis, osteoporosis), viral infections, bacterial infections, fungal (infections, parasitic infections, developmental disorders (e.g. anaemia, cepilepsy), seizure disorders (e.g. cerebral palsy, spina bifida), condortine disorders (e.g. thrombosis, aneurysm), metabolic disorders (e.g. obesity, diabetes), neurological disorders (e.g. stroke, cortebral palsy, gastrointestinal corders (e.g. ulcerative colitis, lysinuria) and transport disorders (e.g. myotonic dystrophy, catatonia, peripheral neuropathy). Sequences (c.g. aBG59943-ABG60220 represent human DITHP polypeptides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                              CC This invention relates to novel mitochondrial targets that can be used CC for therapeutic intervention in treating a disease associated with CC altered mitochondrial function. Specifically, it refers to a method for CC identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that CC can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, CC costeoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial concephalopathy lactic acidosis and stroke (MELRS), mycolonic epilepsy cragged red fibre syndrome (MERRF) or cancer. Accordingly, these CC compositions have neuroprotective, nootropic, antidiabetic, anticarthritis, osteopathic, ophthalmological and CC cytostatic accivities. This polypeptide sequence is a human heart to the invention.
                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                                                                                                                                                              The present invention relates to PRO proteins and their coding sequences. CC The PRO proteins are useful for diagnosing and treating a B cell related cd disorder, e.g. X-linked infantile hypogammaglobulinemia, polysaccharide cc antigen unresponsiveness, selective IgA deficiency, selective IgM cc deficiency, selective deficiency of IgG subclasses, immunodeficiency with thyper IgM, transient hypogammaglobulinemia of infancy, Burkitt's companient hypogammaglobulinemia of infancy, Burkitt's companient in the companient in the companient in the companient in the companient in the companient in the companient in the companient in treating a condition that is responsive to the pRO composition, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and coding sequences are useful as hybridization probes in chromosome and companient or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               문
